

Request for Quotes for Repair Work on the Leachate Collection System at the Lake County Central Landfill Facility

Purpose

The purpose of this solicitation is to select a vendor to do repair work as spelled out below on the leachate collection system at the Lake County Central Landfill Facility in Tavares Florida.

Scope of Work

The selected vendor must be able to trouble shoot the leachate collection system and have knowledge of the control system. We currently have transducers that are inoperable and may repair/replace up to 8 of them. We also have at least one electrical controller in the control panel that is inoperative. The electric wires going the leachate pumps are attached to this controller and there seems to be a disconnect within this controller.

Contractor Requirements

Other than the requirements listed in the body of this request for quotes the selected vendor must have an understanding of leachate collection systems, be able to supply the parts required for repairs within one week and provide three verifiable references demonstrating successful work dealing with problems in a leachate collection system.
