

**5
WAYS
TO**

IMPROVE VISIBILITY

1

Ensure that the motorcycle's headlight beam is properly set and functioning at all times during operation.

2

Wear a brightly colored jacket, such as red or orange, during daytime operation. Wear a white colored and/or reflective jacket during night travel.

3

Avoid driving the motorcycle in other vehicle's blind spots. When in an adjacent lane of travel, avoid the area from the rear passenger door to roughly 20 feet behind a neighboring vehicle.

4

Maintain safe distances from vehicles that you follow. Not only does tailgating increase the risk of rear-end collisions, it also impedes the ability of other drivers to see you.

5

Watch for, and anticipate, other vehicles, particularly on multi-lane roads. Realize that oncoming drivers, depending on the relative positioning of other vehicles, might be unable to see you even though you can see them.
